

The AI Execution Gap

Michael Giambra and Christina France

ESource AI Execution Partners

ABOUT US

At ESource, we turn AI potential into AI performance. For 30+ years, we've helped organizations sharpen how their people work — and today, that means tackling the one thing technology alone can't fix: adoption.

We're tool-agnostic. No platforms to sell, no agenda but yours. We work with what you've already got, find what's holding your teams back, and get them moving.

Having AI isn't the win — using it is.

AI Execution Gap

PROBLEM

- **88%** of CEOs are increasing AI spend.
- **11%** report measurable financial value.
- **77%** have not seen positive financial impact.

It is usually an execution problem, not a technology problem.

Low adoption, knowledge capture, leadership alignment, governance, incomplete process integration, execution capacity, etc.
