

Are You Representing ESource the Right Way?

Your clients trust you. ESource trusts you too.

This certification primer gives you the rules, the language, and the judgment to earn that trust in every conversation.

Rules

Program requirements that govern every partner interaction

Language

Precise terminology to use with clients and ESource teams

Judgment

The situational awareness to route, discover, and represent correctly

Two Companies. One Rule You Cannot Break.

ESource AI Group

Sells The Product Launcher — a seller-readiness solution for product launches, major releases, onboarding, and ongoing readiness.

Separate sales motion. Separate contracts. Separate pricing.

ESource Execution Partners

Tool-agnostic consulting that helps clients understand why AI investment is not creating value. Entry path: Crash Test, then AI CrashScan.

Separate sales motion. Separate contracts. Separate pricing.

⊗ Never blend these two companies in a client conversation. This separation is not a preference — it is a program requirement.

ESource AI Group vs. ESource Execution Partners

Understanding what each entity sells — and what it does not sell — is foundational to correct partner behavior.

Dimension	ESource AI Group	ESource Execution Partners
Primary Offer	The Product Launcher	Crash Test → AI CrashScan
Problem Solved	Sellers not ready when the product is	AI investment not creating value
Use Cases	Product launches, major releases, onboarding, ongoing readiness	AI strategy consulting, diagnostic assessment
Product Assumption	Seller-readiness solution — not a broad AI technology pitch	Tool-agnostic — no product pre-recommended
Cross-Entity Link	Does not automatically follow from Execution Partners	Never automatically leads to The Product Launcher

❏ The two entities do not feed each other automatically. Each engagement stands on its own discovery and routing logic.

Partners Bring Relationships. ESource Brings Everything Else.

The partner role is precisely scoped. Understanding the boundary between partner authority and ESource authority is non-negotiable.

What Partners Bring

- **Relationships**
Trusted access to client stakeholders
- **Discovery Skill**
Ability to surface the right business problem
- **Market Access**
Presence in accounts ESource cannot reach alone
- **Client Context**
Situational intelligence that shapes the conversation

What ESource Brings

- **Products**
The Product Launcher and consulting offerings
- **Pricing & Proposals**
All commercial terms set by ESource only
- **Contracts**
Binding agreements executed by ESource
- **Implementation & Delivery**
All execution managed by ESource teams

⚠ Partners may not independently change or commit ESource to any of the items in the right column. Your value is opening the right conversation and identifying the right problem.

Three Roles. Written Authority Only.

Every partner operates under one of three defined roles. The scope of each role is fixed. Authority beyond that scope requires explicit written authorization — it is never assumed.

1

Referral Partner

Identifies opportunities and makes introductions. The most limited role — no sales activity beyond the introduction.

2

Authorized Sales Partner

Conducts approved discovery and sales support. Activity must remain within the scope defined in the partner agreement.

3

Co-Selling Partner

Participates more deeply in the sales process alongside ESource. Requires explicit written authorization before any co-selling activity begins.

⊗ No partner may assume territory, account ownership, exclusivity, renewal rights, or authority to bind ESource. Those rights exist only when granted in writing.

Before You Sell Anything

Four compliance gates apply before any selling activity begins. Each is a hard requirement, not a guideline.

1 Certification Required

Certification must be completed before any selling activity begins. There are no exceptions to this sequencing requirement.

2 Compensation Governed by Signed Schedule A

Your compensation terms are defined exclusively by your signed Schedule A. No verbal agreement, email, or assumption overrides this document.

3 Lead Protection Requires Written Acceptance

A lead is not protected or commissionable until ESource accepts it in writing. Submitting a lead does not automatically protect it.

4 No Assumed Rights

No rate, territory, or account right should be assumed or quoted to a client. If it is not in writing, it does not exist.

Role-Check – Test Your Instincts

Before moving on, test your instincts on the separation and authority rules.

"Ask your instructor in the sidebar to walk you through a quick role-check scenario. Describe a partner situation aloud – for example, a partner who wants to quote a price and promise delivery timing – and ask whether that action falls inside or outside partner authority and which rule applies."

Scenario Prompt

A partner quotes a price to a client and promises a delivery timeline before ESource has been engaged.

Questions to Answer

Which rule does this violate? Which partner role boundary was crossed? What should the partner have said instead?

What to Listen For

Pricing and delivery commitments belong exclusively to ESource. No partner role authorizes these actions without written approval.

📄 Role-check exercises reinforce the boundary between partner authority and ESource authority. Practice the language until it is instinctive.

Discover First. Route Second.

Routing too early is one of the most common partner mistakes. The correct sequence is always: understand the business problem first, then determine which ESource team should be involved.

Use this phrase when uncertain: "I want to understand the business problem before recommending which ESource team should join us."

Leading with a Product (Wrong)

- Assumes the solution before understanding the problem
- Risks blending ESource AI Group and Execution Partners
- Destroys credibility if the product does not fit
- Violates the separation requirement

Leading with the Problem (Correct)

- Surfaces the real business need first
- Keeps both ESource entities as valid options
- Builds trust through diagnostic rigor
- Routes accurately to the right team

The SPIN Discovery Sequence

SPIN is the structured discovery methodology partners use to surface the right business problem before routing. Ask first. Let the client describe the value. Then route.

Situation

Establish context. What is the client launching, adopting, or trying to improve? Set the foundation before probing for problems.

Problem

Surface what is not working today. Let the client articulate the gap — do not diagnose on their behalf.

Implication

Make the cost of inaction real. Connect the problem to revenue, time, confidence, and competitive risk.

Need-Payoff

Let the client describe the value of solving it. Their words become the basis for routing and proposal framing.

The SPIN sequence is not a script — it is a discipline. The goal is to let the client's own language define the problem and the value before any ESource solution is named.

Certification Summary: The Rules That Govern Every Conversation

These are the non-negotiable principles that define compliant partner behavior across every client interaction.

Company Separation

ESource AI Group and ESource Execution Partners are separate businesses with separate sales motions, contracts, and pricing. Never blend them in a client conversation.

Written Authority Only

Territory, account ownership, exclusivity, renewal rights, and authority to bind ESource exist only when granted in writing. Assume nothing.

Certification Before Selling

No selling activity may begin before certification is complete. Compensation is governed exclusively by your signed Schedule A.

Lead Protection Requires Acceptance

A lead is not protected or commissionable until ESource accepts it in writing. Submission alone does not protect a lead.

Discover Before Routing

Never lead with a product. Use the SPIN sequence to surface the business problem, then route to the correct ESource entity.

Your value as a partner is opening the right conversation and identifying the right problem. ESource brings everything else.
