

The AI Execution Gap

Walking rehearsal for Christina France

AI does not create value.
AI adoption creates value.

The Core Thesis

Companies are investing in AI, but many are not getting measurable business value.

The AI Execution Gap

The space between AI investment and business results

AI does not create value.
AI adoption creates value.

The Portfolio Value Gap

The investment may be real, but the value is still trapped.

AI investment + Strategy = Business results

What can widen the gap?

- Leadership alignment
- Workforce adoption
- Workflow integration
- Data and governance
- Knowledge capture
- Execution capacity

Team Buy-In Is an Execution Condition

Technology + strategy – team buy-in =

FAILURE

Technology + strategy + team buy-in =

VALUE CREATION

Employees need purpose, a voice in the workflow, a credible benefit, skills, time, and support.

CrashTEST

The fast signal

Is there an AI execution problem worth investigating?

Low friction
Focused question
Clear next decision

CrashTEST is not a full audit.

CrashSCAN

The deeper diagnosis

Where is value leaking, why is it happening, and where should the organization act first?

CrashTEST asks: Is there a problem worth investigating?

CrashSCAN asks: What is the problem, and what should we do next?

Analysis First

Execution happens only when the evidence supports it.

CrashTEST

fast signal

CrashSCAN

deeper diagnosis

Right-sized action

only if warranted

**We are not selling change for the sake of change.
We are helping the client create measurable value.**

The Close

Without the team, the strategy will fail.

**AI does not create enterprise value.
Execution does.**

AI adoption creates value when the team helps shape the solution and the organization measures the result.

Ask Christina

Is the message clear? What would a prospect misunderstand?
