

According to McKinsey, more than 50 percent of all product and service launches fail to hit their original business targets. ^[1]

The Product Launcher Promise:
*Shorter ramp time. Increased sales pipeline.
Increased close rate. Shorter time to revenue.*

Product Launcher Guide

Are your sellers ready before the first customer conversation?

Product Launcher: From Launch Information to Field Readiness

A guided presentation for sales and sales-enablement leaders

The real sales-readiness gap

Training completion is not the same as sales readiness

Sellers need four things before a live customer conversation:

Product knowledge they can actually use

Realistic practice on objections and messaging

On-demand access to expert guidance

Evidence that they are ready

The shift: from delivering launch information to producing readiness evidence

What Product Launcher brings together

One connected sales-readiness system

AI Teacher

Presents launch knowledge and answers questions

Role Play Engine

Buyer simulations with coaching and scoring

Digital Twin

SME knowledge captured once, available on demand

Advisory Panel

Aligned expert perspectives reusable at scale

Course Builder and Content Builder

Approved materials made AI-ready

AI Learning Platform

The central hub for users, content, and readiness signals

📌 The value is not the tools individually. It is the connection between them.

Role Play Engine: practice before revenue is on the line

- Reps rehearse realistic buyer conversations before they enter the field
- Scenarios include common objections, tough questions, and product messaging
- Reps can repeat practice, receive coaching, and improve
- Scoring and feedback make progress visible to reps and managers
- Weak messaging and difficult objections surface before launch day

Advisory Panel: expert knowledge that scales

Expert insight captured once, aligned, and reused across the launch

- Validates messaging before it reaches the field
- Clarifies product details against approved content
- Surfaces likely buyer questions and objections in advance
- Keeps product, medical, commercial, and enablement perspectives aligned

Sellers get expert guidance without requiring an SME to be available every time

What a successful pilot can show

These are outcomes to measure and validate — not guaranteed results

Faster time to readiness

Higher seller confidence before live conversations

Better role-play scores through repeatable practice

Improved knowledge retention after formal training

Expanded SME access without overloading experts

Earlier visibility into readiness gaps for managers

Readiness evidence: usage, practice frequency, scores, confidence signals, and qualitative feedback

Start small. Prove value. Scale what works.

Eight stages for a focused, measurable pilot

01

Define

Choose a specific launch or sales-readiness use case

02

Source

Use approved product, marketing, training, and SME materials

03

Build

Configure the full connected Product Launcher experience

04

Validate

Have SMEs and enablement leaders review content and scenarios

05

Launch

Begin with a controlled user group

06

Measure

Track adoption, practice, knowledge, and readiness signals

07

Improve

Refine based on evidence from reps, managers, and SMEs

08

Scale

Expand only after the pilot demonstrates clear value

❏ Keep the pilot small enough to learn quickly, complete enough to test the integrated model.

Three things to take away

Product Launcher moves sellers from launch information to field readiness

Its value comes from connecting knowledge, practice, expert access, and readiness evidence in one workflow

The right next step is a focused pilot — not a broad rollout

Ask your presenter any question about the model, the components, the pilot approach, or how this could apply to a specific launch you have in mind.
