Building a Course with the ESource Course Designer

What if you could turn a folder of source documents into a finished, publisher-ready course in under an hour? By the end of this session, you will do exactly that.

What You Will Be Able to Do

1. Load your source documents and choose what the course uses
2. Describe the audience and generate a course outline
3. Turn that outline into Gamma slides and matching instructor notes
4. Hand off files that are ready for the Course Publisher — without help

Where This All Lives

01

Open the Product Launcher Development Suite

02

Click the Course Designer tab

03

Signing in to the suite signs you in to the designer automatically

04

No separate login needed

Always Start Clean

Before every new course, click "Start a new course" in the green box

When prompted, click "Yes, clear it"

What this does

This empties every field and resets every choice

⚠ Skipping this step mixes old work into your new course

Load Your Source Library

01

Click "Load source library"

02

Choose the client from the list

03

Tick the documents this course should use

04

Only ticked documents shape the outline and slides

Adding Your Own Files — The Size Rules

Files you add yourself are temporary — they last for this build only

Temporary files: up to 3 MB total across all files you add

Over 3 MB total: click "Save these files to the source library (permanent)"

Permanent files: up to 25 MB each and stay available for future courses

When a File Is Too Large to Upload

Large PowerPoint deck?

Open it, go to Picture Format, then Compress Pictures

Or save the deck as a PDF and upload that instead

Warning about PDF export

⚠ A standard PDF export drops the speaker notes

To keep notes, export as Notes Pages in PowerPoint

Video and Audio Files

- Video and audio files cannot be uploaded to the designer
- Paste the link to the file and save it to the library instead
- The link travels with your course build

See It in Action — Loading the Library

Watch: [ADD VIDEO LINK]

Activity — Load and Save

Ask your instructor to walk you through this activity

01

Load a client library and tick two documents

02

Add one new file and save it as a permanent file

03

Confirm it appears in the library before moving on

Describe Who the Course Is For

Step 2: enter the audience role and pick their experience level

The designer uses this to shape tone, depth, and examples

Both fields are required before you can draft the goal

Draft the Goal and Topics Automatically

Step 3: click "Draft these 3 fields from the source library"

The designer writes the goal, learner result, and must-include topics from your ticked documents

> You need the audience role and at least one ticked document for this to work

Review what it drafts and edit anything that is not quite right

Set the Course Shape

Step 4

Course title is optional — leave it blank and the designer proposes one

Choose length, depth, and language style

Step 5 (optional)

Name topics to avoid, and sources or products to emphasize or ignore

Advanced options let you set a maximum or exact number of modules, or let the system decide

Create the Course Outline

Click "Create the course outline"

It takes about 30 to 60 seconds

When it appears, read it carefully before going further

This is your control point

The Outline Is Yours to Edit

Edit objectives, module titles, and design notes directly in the outline

Satisfied with the shape? Then move on

Need to start over? Click "Regenerate from the form"

Building a delta course? Save the old deck as a permanent file and tick it so the designer can see what is changing

Activity — Build and Edit an Outline

Ask your instructor to run the outline activity with you

01

Create an outline for a sample course using the form

02

Edit one module title or objective before continuing

03

Do not generate slides yet

Generate the Slides

01

Click "Next: Generate slides from this outline"

02

This takes about one minute

03

When it finishes, click "Copy all slides for Gamma"

04

Then click "Open Gamma paste page" and paste

Build the Deck in Gamma and Export

Build and format your deck inside Gamma

When the deck is ready, export it as a PDF

That PDF goes to the Course Publisher

See It in Action — Slides into Gamma

Watch: [ADD VIDEO LINK]

Generate the Instructor Notes

01

Click "Next: Generate instructor notes"

02

This is the longest step — allow up to 2 to 3 minutes

03

When it finishes, check the match message

⚠ The number of notes must equal the number of slides — if they do not match, the publish step fails

Fix a Mismatch Before You Hand Off

If the counts do not match

Edit the notes to align them or regenerate

Do not hand off mismatched files

Once the counts match

Download the notes file: INSTRUCTOR_NOTES.txt

Give the Course Publisher the PDF and the notes file together

Save Your Work

The designer saves your work automatically on this computer as you go

To back up or move your work, click "Save all my work (one file)"

To open that backup on any computer, click "Open a saved file"

Never rely on one computer alone for a file you cannot afford to lose

Optional — Private Knowledge Check

A private knowledge check is available on the two rules that matter most

Nothing is recorded — it is just for you

Ask your instructor to run the knowledge check with you now

You Are Ready to Build

Thank you for completing Building a Course with the ESource Course Designer

Your next step: open the Course Designer, click "Start a new course," and build your first real course

Your instructor stays open in the sidebar if you have questions along the way
