STABILIZING SINGLEOPS WORKFLOWS

Phased Implementation & Crew Training Strategy

Ensuring scalability, efficiency, and bilingual crew adoption.

BAKER LANDSCAPE DESIGN

OPERATIONAL BARRIERS

Fragmented data and low adoption are currently preventing the business from growing without administrative burnout.

FRAGMENTED COMMUNICATION

COMMUNICATION SILOS

Notes and photos scattered across WhatsApp threads and handwritten notes.

Impact: Lost data, slow invoicing, and high error risks.

MANUAL TRACKING

Hours estimated or corrected manually instead of system clock-ins.

Impact: Payroll errors and unreliable job profitability data.

BILINGUAL IMPLEMENTATION PLAN

PHASE 1

System Cleanup

PHASE 2

Photo Adoption

PHASE 3

Spanish Notes

PHASE 4

Timekeeping

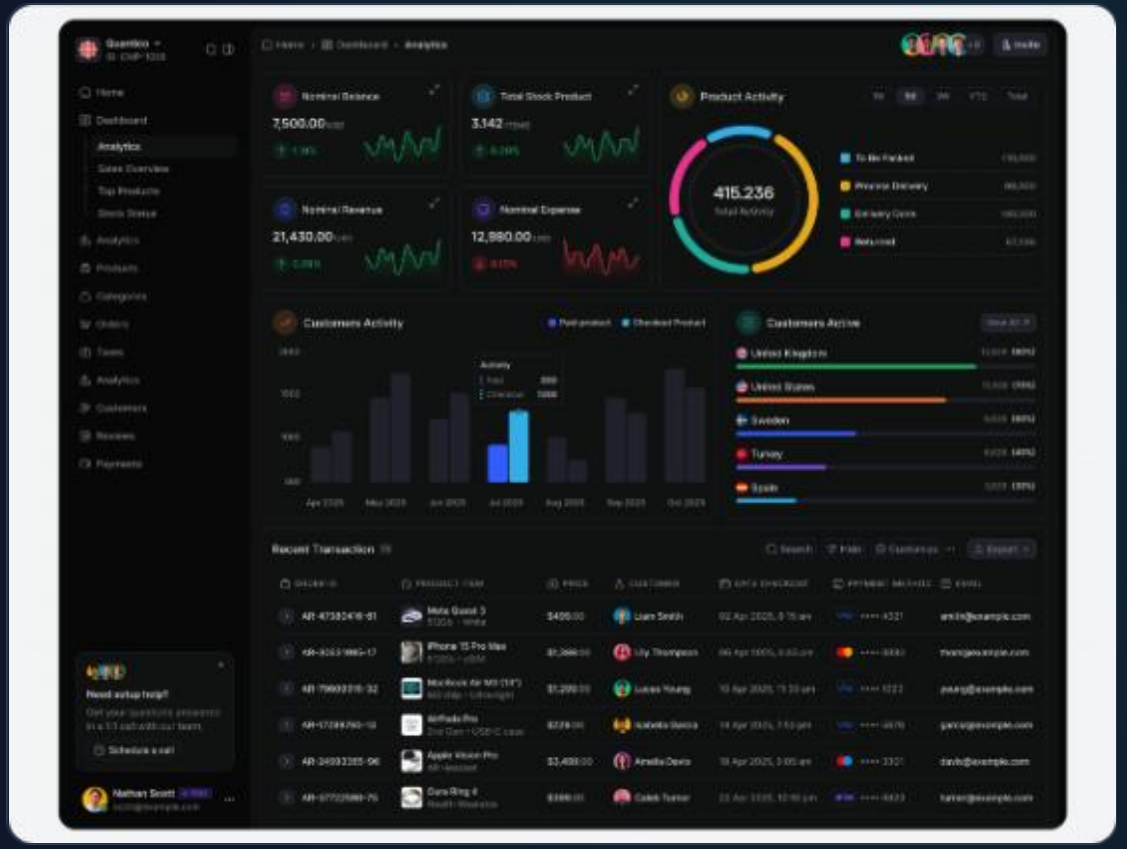

PHASE 5

Full Adoption

PHASE 1: ADMIN PREPARATION

BACK-END RELIABILITY

- Clean customer records and job types.
- Create standardized bilingual templates.
- Design realistic workflows that match field habits.
- Implement ChatGPT workflows for Spanish-to-English conversions.

PHASES 2 & 3: FIELD ADOPTION

THE PHOTO WIN

Crews already take photos. Moving this behavior from WhatsApp to SingleOps is the "lowest friction" behavioral change.

Goal: 100% photo consistency.

BILINGUAL NOTES

Provide Spanish prompts (Qué hicimos hoy). Allow crews to write in their native language to ensure accuracy.

Outcome: Detailed job summaries.

BILINGUAL ALIGNMENT

BRIDGING THE GAP

Our strategy eliminates the language barrier by allowing Spanish inputs that auto-convert into professional customer-ready English summaries.

This removes the "intimidation factor" of the app, turning it into a tool rather than extra work.

FIELD TRAINING STRATEGY

MICRO-VIDEOS

5-10 minute practical sessions shared via WhatsApp.

CHAMPION MODEL

Identifying leads to reinforce field habits daily.

SPOT AUDITS

Weekly check-ins to recognize and reward consistency.

WORKFLOW TRANSFORMATION

The Past: WhatsApp chaos and scattered photo threads.

The Future: Structured data and field accountability.

90-DAY EFFICIENCY ROADMAP

Milestone: Transition from "Manual Tracking" to "Data-Driven Scalability".

Q&A

Ready to stabilize and scale operations.
