

Are You Selling the Right Company to the Right Buyer?

Two companies. One routing decision. Every deal depends on getting it right. Your instructor is live beside this slide — say hello and let's begin.

Why Two Separate Companies Matter

ESource AI Group sells defined learning, enablement, and AI solutions. ESource Execution Partners diagnoses why AI investments are not delivering value.

Different scopes. Different contracts. Different revenue. Never blended.

Getting this wrong costs the deal — and the client's trust.

What ESource AI Group Sells

Primary Offer

The Product Launcher — sales-team readiness for product launches and major releases.

Also Sells

Custom AI Solutions and AI Classes and Learning Programs.

Sales motion is use-case-first and solution-led.

AI Group owns the proposal, contract, delivery, CRM record, and revenue for every AI Group opportunity.

What ESource Execution Partners Sells

Tool-agnostic consulting for leaders who do not know why AI investments are failing.

Entry Point

The Crash Test — paid, low-friction, one department or workflow.

Deeper Path

CrashScan, Challenger, Roadmap, Adoption Sprints, Scale and Sustain.

Ownership

Execution Partners owns its own proposal, contract, delivery, CRM record, and revenue — always separate.

The Four Routing Rules

- 1 A buyer with a defined product-launch or seller-readiness problem who wants a direct solution routes to AI Group.
- 2 A buyer who does not know why AI investments are failing routes to Execution Partners.
- 3 An Execution Partners Challenger and Roadmap that confirms an AI Group fit becomes a disclosed referral with a separate proposal.
- 4 An AI Group discovery of broader adoption or governance problems becomes a separate Execution Partners conversation.

Every routing decision goes into CRM. Pitching all offers at once is prohibited.

Where to Focus First

Current companywide 90-day effort allocation:

60%

Toward The Product Launcher.

40%

Toward Crash Tests and CrashScans.

Lead with the offer that fits the buyer's problem — not the catalog.

Routing Drill — Your Turn

You have heard the four routing rules. Now test them.

Your instructor beside this slide has three brief buyer scenarios ready. Tell your instructor which company you would route each scenario to and explain your reasoning. Ask your instructor to confirm or correct your thinking before moving on.

The Offer Portfolio at a Glance

AI Group

- The Product Launcher
- Custom AI Solutions
- AI Classes and Learning Programs

Execution Partners

- Crash Test
- Execution Gap Diagnostic (CrashScan, Challenger, Roadmap)
- Value Creation Partnership (Adoption Sprints, Scale and Sustain)

Six offers total. One business problem opens each conversation. Components are not the pitch — the buyer's problem is always the opening.

The Product Launcher — Triggers and Buyers

Priority Buyers

- CROs
- Sales and Revenue Enablement leaders
- Product Marketing and Product Management leaders
- L&D leaders
- PE operating partners

Triggers

- Approaching product launch
- Inconsistent sales readiness
- Reps unable to access approved answers
- Long ramp times
- Overwhelmed subject-matter experts
- Distributed or multilingual teams
- Need for a practical AI learning program

Open with the business problem. Components follow from fit.

Execution Partners Offers — Triggers and Buyers

Priority Buyers

- CEOs, COOs, CFOs
- PE and VC operating partners
- CHROs
- Sales and Revenue Enablement leaders when independent diagnosis is needed

Triggers

- AI licenses or pilots not changing business results
- Persistent workflow friction
- Inability to prove ROI
- Managers unprepared to coach AI-enabled work
- Knowledge trapped in key people
- Growing shadow AI or vendor duplication

Pricing

Crash Test working range: \$7,500 to \$12,500.

Focused CrashScan approximately \$30,000.

Full diagnostic approximately \$60,000 to \$100,000.

Value Creation Partnership is custom priced.

Trigger-to-Offer Drill — Your Turn

Think about a buying trigger you just heard described. Tell your instructor the trigger, name the offer it maps to, and explain your reasoning. Ask your instructor to confirm the match or redirect you before continuing.

Qualifying an AI Group Opportunity

Advance only when you can confirm all of these:

1

Specific business problem and defined urgency.

2

Named sponsor who owns the result, budget, and decision.

3

Known user group, usable source material, and measurable baseline.

4

Credible budget and willingness to pursue a paid POC.

Capture the problem statement in one page before any demonstration or proposal.

Qualifying an Execution Partners Opportunity

Advance only when you can confirm all of these:

1

A specific operating result that is not changing and a visible execution gap.

2

Named executive sponsor with focused and bounded scope.

3

Manager and employee access, available evidence, and budget with deposit authority.

4

The client accepts that the engagement may end with a defer or stop decision.

One page. Problem, scope, sponsor, evidence, decision needed — before any proposal.

The Six-Stage AI Group Sales Path

01

Identify

An urgent funded use case.

03

Demonstrate

The smallest relevant solution — end with a proposed paid POC.

05

Deploy

By converting a successful POC to a signed production agreement.

02

Discover

Confirm problem, sponsor, users, baseline, and commercial fit.

04

Prove

Through a paid, tightly scoped POC with agreed success measures.

06

Expand

Only when current value is credible and the next use case has its own sponsor and business case.

The Six-Stage Execution Partners Client Value Path

01

Assess

Via Crash Test — clarity on one department or workflow.

02

Diagnose

Via CrashScan — root-cause evidence.

03

Challenge

Via Challenger — pressure-test the proposed response.

04

Plan

Via Roadmap — accountable operating plan with owners, baselines, and KPIs.

05

Execute

Via Adoption Sprints — measurable value with a bounded use case and accepted baseline. No Sprint without a baseline and measurable outcome.

06

Sustain

Via Scale and Sustain — embed execution capacity and transfer capability to the client.

The Paid POC — What It Is and What It Is Not

What It Is

A commercial decision instrument.

Scope: one use case, one sponsor, one user group, one defined decision.

Duration: typically 30 to 90 days.

What It Is Not

Not a free demonstration. Not a miniature enterprise transformation.

Client must provide: approved content, subject-matter expert access, user participation, an administrative owner, a security review, and baseline data.

Lead with readiness, adoption, knowledge, practice, speed, and workload measures. Do not promise immediate revenue or pipeline improvement unless the POC is designed with sufficient time, user volume, and attribution to support the claim.

A completed POC ends with a documented sponsor decision: deploy, revise and retest, defer, or stop.

Team Buy-In — A Qualification Dimension, Not a Soft Theme

AI adoption creates value. AI alone does not. Every recommendation must show both the P&L benefit and the employee benefit. A business-only case is incomplete.

CrashScan must include executive, manager, and frontline employee interviews. No adoption-readiness assessment may rely on executive interviews alone.

Discovery risk signals: no employee participation planned, managers uninformed about the change, job-impact fears left unaddressed.

The Team Buy-In Score affects opportunity ranking. A high-value use case with Level 1 or Level 2 buy-in is not execution-ready without explicit mitigation.

Qualification Role-Play — Your Turn

Your instructor beside this slide has a sample opportunity scenario ready. Describe the scenario details to your instructor and ask for a qualification check on both the AI Group dimensions and the Team Buy-In signals. Your instructor will tell you which criteria are met, which are missing, and what the correct next step is.

What Partners Are Authorized to Do

That is the full scope of independent partner authority.

Open Relationships

Open qualified relationships using approved messaging.

Conduct Discovery

Conduct approved discovery using playbook questions.

Route Opportunities

Route opportunities to the correct company.

Record in CRM

Record every activity in CRM using the correct stage definitions for the relevant company.

What Requires Escalation

Partners may not commit any of the following without approval:

Pricing or price ranges

Scope or custom features

Security positions

Product roadmap items

Outcomes of any kind

Escalate to the appropriate commercial lead or executive sponsor. When in doubt, stop and route up.

CRM Discipline and Staying Current

AI Group and Execution Partners each have distinct CRM stage definitions — use the right set for each company. Document every routing decision in the record. All approved claims, demo rules, pricing approval rules, and compensation terms live in the Sales Partner Enablement asset group within the ESource AI Trainer. The AI Trainer is updated rapidly. Partners are responsible for staying current when names, pricing, claims, demos, or sales rules change.

Certification – Required Before You Route Any Live Opportunity

Complete all three ESource AI Trainer courses before advancing or routing any real opportunity.

1

Course one

Selling the AI Execution Gap

2

Course two

Selling The Product Launcher

3

Course three

Choosing the Correct Offer

Certification is not optional. It is the gate before live partner activity begins.

Boundary and Escalation Drill — Your Turn

Describe a situation to your instructor where you feel tempted to quote a price range or commit to a custom feature. Ask your instructor to confirm what you should do instead and what the correct escalation path is. This is your final practice before the knowledge check.

Optional Knowledge Check

A brief private knowledge check is available now. It covers routing rules, qualification dimensions, and partner boundaries — the areas that most directly affect deal quality and compliance. Nothing is recorded. It is for your own confidence before you work a live opportunity. Ask your instructor to begin when you are ready, or move to the final slide.

You Are Ready to Start — Here Is Your Next Step

Thank you for completing An Introduction to the ESource AI Sales Channel. Your next action: open the ESource AI Trainer and begin your certification — Selling the AI Execution Gap first. Do not route or advance any live opportunity until all three courses are complete. Your instructor is here if you have questions before you go.
